

E-Coli Testing:

For those interested in testing for the presence of E. coli in their water, High School/Lake Association Partnership testing program offers a safe and simple alternative to sending water samples away to the laboratory to incubate and then read the results. Sound too good to be true, School Project Director Randy Cook has performed research verifying the results found by this methodology.

If you are interested, you can order enough plates to perform 25 tests, the necessary pipettes and an easy to read and follow instruction guide. Simply fill out the attached form and write out a check to the Michigan Lake & Stream Associations (MLSA), in the amount of \$70.00 per package, and the MLSA will send the above mentioned items directly to you.
